                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            such proteins and a CFH antigens can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This partial protein sequence represents a region of the human tumour-associated complement factor H (CFH). This sequence is used in the identification of complement factor H related proteins and antigens isolated from clone prBB9FH410 (see W39155). The detection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         H related antigen, or nucleic acid encoding it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 6B; Fig 6B; 104pp; English.

The detection of this protein and a CFH antigen can be used in screening or for the treatment of renal or urogenital cancer, e.g. bladder, cervical or prostate cancer. Agents that may modulate this antigen could be used in the manufacture of a medicament for the treatment of a tumour cell.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This DNA encodes a protein having homology to human complement factor H, which plays a role in the immunological mechanism involving the complement reaction. The protein can also be used as an antigen for preparing antibodies against the protein. The cDNA can be used as a probe for gene diagnosis and the gene for gene therapy, as well as for large-scale expression of the protein. The protein may also have immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, anti-inflammatory receptor/ligand activity, etc. The protein is identified by the presence of a hydrophobic N-terminal secretory signal region, knowledge of the protein function is not required, as in e.g. methods of expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                    Human C4 binding protein.

This sequence was deduced from human hepatocyte (Hep G2) cDNA obtained following PCR amplification. The protein is a monomer containing 8 SCRs. Each SCR forms a looped domain due to the presence of two intradomain disulphide bonds (only the disulphide bonds of SCR8 are labelled in the Features Table). Within each SCR, the first cysteine residue bonds with the third and the second cysteine residue bonds with the fourth. This secondary structure is responsible for the conformational flexibility of the C4bp monomer. The invention covers fusion proteins in which the monomer sequence, or a specified subfragment of it, e.g. having 5, 4, 3 or 1 SCR(s) is fused to the C-terminal of a protein such as a viral receptor, cell ligand, a bacterial, viral or parasitic immunogen, enzyme, cytokine, toxin, etc. See also Q13243-51.
                                                                                                                                                                                                                                                                         New C4 binding protein fusion proteins and DNA encoding them comprise assemblies of C4bp monomers linked to functional moiety, e.g. AZT, useful as delivery vehicles in diagnosis and therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Region

                                                                                          Y55757 standard; Protein; 453 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specified substitution variants of it are claimed in which certain positions in SCR-1 which have been identified as important for the degree of C3b- and C4b-binding are substituted by amino acids from the corresponding positions in SCR-8. The specification does not contain the CRI-4 sequence; the sequence given here was constructed from the full-length CRI amino acid sequence having GENESEQ accession number RI1810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The CDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of them.

                                                                                                                                                                                                                                                                                                                                                                                                                                   may be mediated through the inhibition of complement pathway enzymes. The soluble CRI protein exhibits a complement regulatory activity, and this may be used to prevent reperfusion injury, inhibit Arthus reaction, and neutrophil mediated tissue damage, and reduce myocardial infarct size, and inflammation. The CRI protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, e.g. shock lung, tissue damage due to burn, or ischemic heart conditions, and autoimmene disorders. CRI proteins, analogues, derivatives, and anti-CRI antibodies are used in assays, and diagnostics. The present sequence represents the human CRI protein long homologous repeat (LHR)-C fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C3B/C4B receptor; CRI protein; cell-surface protein; erythrocyte; human; complement regulatory activity; complement pathway enzyme; tissue damage; reperfusion injury; Arthus reaction; myocardial infarct; inflammation; heart condition; autoimmune disorder; long homologous repeat; LHR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a human C3B/C4B receptor (CR1) protein. The CR1 protein or fragment is expressed as a cell-surface protein on the surface of a non-human cell and exhibits a complement regulatory activity of full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-JUN-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              immuno-modulators for treating multiple sclerosis. (A) are administered orally, topically, by injection or inhalation at 0.01-10 (preferably 0.1-10) mg/kg/day.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence represents human complement receptor 1 (CR1, CD 35) N-terminal fragment. The invention relates to a soluble derivative (A) of a soluble polypeptide (I), which comprises at least 2 heterologous membrane-binding elements (MBE) of low membrane affinity covalently associated with (I). MBE interact, independently and with thermodynamic additivity, with components of cellular or artificial membranes exposed to extracellular fluids. (A) are used to treat disorders treatable with (I) itself, specifically inflammation or any other complement-related disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorder (e.g. neurological disease, graft rejection, myocardial infarction, sepsis, rheumatoid arthritis and many others; including application to indwelling devices) and thrombolytic disease, but also treat allergy, induce weight loss, to treat ischaemia or astuma and as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      length human CR1 as expressed on erythrocytes. The CR1 function in vivo may be mediated through the inhibition of complement pathway enzymes. The soluble CR1 protein exhibits a complement regulatory activity, and this may be used to prevent reperfusion injury, inhibit Arthus reaction, and neutrophil mediated tissue damage, and reduce myocardial infarct size, and inflammation. The CR1 protein and its fragments can also be used in the treatment of conditions which involve unwanted complement activity, e.g. shock lung, tissue damage due to burn, or ischemic heart conditions, and autoimmune disorders. CR1 proteins, analogues, derivatives, and anti-
CR1 antibodies are used in assays, and diagnostics. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Qy
                                 This is full-length CR1 protein, and shortened forms are new, lacking the transmembrane region. The proteins and fragments bind C3b and/or C4b, have cofactor activity and inhibit C3 and C5 convertase activity. In the sequence, x=untranslated region. This has 7 short consensus repeats (CR) of 4 long direct homologous repeats (LHR) (see fig. 10 in patent). Deletion mutants, eg LHR-A for binding of C4b, and LHR-C for C3b binding, be made, and LHR-B and -C can detect CR2 sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Кеу
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CR1 protein

                                                                                                                                                                                                                                                                                                                                                                           The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are claimed in which certain positions in SCR-2 which have been identified as important for the degree of C3b and C4b-binding are substituted by amino acids from the corresponding positions in SCR-9. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1 amino acid sequence having GENESEQ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R11982;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          R11982 standard;
This sequence comprises three of the four tandem, direct, long homologous repeats of the full-length F allozyme of CR1. LHR-A absent. Each LHR might represent a single C3b/C4b binding doma.
                                                                Human complement receptor type 1 gene, encoded proteins and fragments - for treatment of immune disorders, myocardial idemage due to inflammmation and in treatment of thrombosis
                                                                                                                                                                                                                                                                                                                                                                                              Region

The LHR's are composed of 7 short consensus repeats of 60-70 residues resembling the SCR's of other C3/C4 binding proteins. The protein and fragments of it having C3b and/or C4b binding activity can be used to treat immune disorders involving inappropriate complement activity.

```
internalises bound complexes, either by adsorptive endocytosis

or by phagocytotsis. The function of CR1 on B lymphocytes is less

cwell defined. CR1 can inhibit the classical and alternative pathway

c3/c5 convertases and act as a cofactor for the cleavage of C3b and

c4b by factor I, therefore CR1 has a complement regulatory function

as well as acting as a receptor. CR1 is a glycoprotein composed of

dentified, differing by increments of approx. 40-50 kD. The two most

common forms, the F and S allotypes, also termed A and B allotypes,

have molecular weights of 250 and 290 kD respectively. The two rarer

forms have molecular weights of 210 and 290 kD. These differences

cepresent differences in the polypeptide chain of CR1, rather than

glycosylation state because they are not abolished by treatment of

purified receptor portein with endoglycosidase F. The CR1 gene has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Carson GR, co
                                                                                                                                                                                                                                                                                                                           activators. The consequences of these interactions depends on the type of bearing the receptor. Erythrocyte CR1 binds immune complexes for transport to the liver. CR1 on neutrophils and monocytes
                                                                                                                                                                                                                                                                                                                                                                                                     receptor (CR1). CR1 is present on erythrocytes, monocytes/macro-phages, granulocytes, B cells, some T cells, splenic follicular dendritic cells and glomerular podocytes. CR1 specifically binds C3b, C4b and inactivated C3b (iC3b). A soluble form of the recepis found in plasma which has ligand binding activity and the same molecular weight as membrane-associated CR1. CR1 binds C3b and C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding polypeptide having complement regulatory activity - used to prevent reperfusion injury, inhibit Arthus reaction and neutrophil mediated tissue damage and reduce
                               been shown to have repetitive intervening sequences which may have been duplicated in the formation of the larger allotypes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 1; Fig 1; 90pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The cDNA clone designated CR1-4 was described in J.Exp.Med.(1988) 168:1255-1270. It encodes the first 8 and a half amino terminal SCRs of CR1. The invention concerns analogues of "regulator of complement activation" proteins or truncated, hybrid or recombinant forms of them. CR1-4 is a preferred truncated form and a number of specified substitution variants of it are disclosed in which certain positions in SCR-5-6 are substituted by amino acids from the corresponding positions in SCRs which are involved in C3b- and C4b-binding. The substitution variant given here has increased C3b-binding. The substitution variant given here has increased C3b-binding. The specification does not contain the CR1-4 sequence; the sequence given here was constructed from the full-length CR1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Complement activity regulator protein analogues - useful for treating auto:immune diseases, to suppress transplant rejection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amino acid sequence having GENESEQ accession number R11810 and descriptions in the disclosure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 8; Page 18 and R11810; 23pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plasma
```

complement

factor H precursor,

short splice

form -

A; Description: a cofactor in the inactivation of C3b

by serine proteinase I;

also

C; Function

```

C;Comment: C4BP controls the classical pathway of complement activation. It binds as a checked the degradation of the C4bC2a complex (C3 convertase) by dissociating the complement from C;Comment: C4BP occurs in plasma in two forms, both of which bind complement fragment C4 isulfide bonds. The beta chain binds the vitamin K-dependent plasma protein S. A minor fine control of the capacity of the capacity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A;Molecule type: protein
